The MagnaClean Professional

SERIOUS SOLUTION for a SERIOUS PROBLEM.

An innovative new product for professionals and perfectionists looks set to revolutionise the maintenance of efficiency levels in central heating systems.

Magnaclean® is a powerful, compact magnetic filter with a unique swirl chamber designed to remove 100% of suspended Iron Oxide and other particulate from the water circulating through the heating system.

Unlike typical Y-strainer filters which clog up and experience a dramatic reduction in flow performance, Magnaclean® maintains full flow rates at all times, and is so powerful it will retain at least 50X the amount of debris on its easily removed sheath. The incredibly tough 'Glass fibre reinforced Nylon' shell is almost unbreakable.

Incorporated into the lid is a special air vent, which allows installers to quickly and easily add corrosion inhibiting chemicals without the need to isolate the filter.

Simply unscrew the vent nipple (one-way valve shuts off), connect the chemical adaptor (supplied with all concentrates) and introduce the liquid directly into the heart of Magnaclean, where it will quickly disperse into the circulating water. Replace the vent. Job done!

Initially available to suit 22mm pipe work, it is planned to introduce a 28mm version of Magnaclean® shortly to suit larger dwellings.

Priced at just £75.00 + vat
